

New Nilfisk VP300 R. R for recycled – and ready-to-roll

Now the everyday power tool is made from recycled plastic

We have added yet another benefit to our Nilfisk VP300 - an R. Now the everyday power tool is made from a minimum of 30% recycled plastic.

Sustainable. Reliable. Affordable

- Made from 30% recycled PCR plastic
- Robust on/off switch
- Efficient HEPA filter
- Non-marking protective bumper
- Discrete and secure storage for accessories between rear wheels. Protected rear wheels
- Cord storage
- Space-saving when not in use

NILFISK

A more sustainable alternative

There are two sources of recycled plastic.

Post-consumer plastic and post-industrial plastic - PCR and PIR.

PCR is made from plastic waste like bottles, packaging, and containers from households, etc.

PIR is made from plastic waste generated from the manufacturing process like rework, regrind, and scraps.

In short, PCR is a more sustainable type of recycled plastic. Reducing the overall plastic waste has a higher environmental impact.

The new Nilfisk VP300 R is made from PCR plastic.
